DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1-6, 11-14, and 16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cox et al. in view of Konietzki.

The patent to Cox et al. discloses an apparatus for dispensing a liquid-gas foam string of encapsulated plastic resin (Column 2, lines 48-53), the string including a chemical composition; and a dispenser for dispensing the string from the can toward a target, the string being dispensed far enough away from the can so that the user does not substantially contaminate an area around the target. The foam string comprises a liquid-gas foam string as recited in claim 4. Cox et al. do not disclose a scent for a hunter to hunt animals. The patent to Konietzki teaches a scent propagation device for luring animals for a hunter, the device comprising a scented string 21 for attracting animals. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Cox et al. by providing an animal attracting scent to the foam string of Cox et al. and using the device to lure animals for hunting as taught by Konietzki. The device of Cox et al. and Konietzki is fully capable of carrying out the methods as recited in claim 2. Regarding claim 16, one of ordinary skill

in the art would obviously know to make the foam string sufficiently strong as recited in order to prolong the life of the foam string and save on cost and material.

3. Claims 7-10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cox et al. in view of Konietzki as applied to claim 1 above, and further in view of Easley. Cox et al. and Konietzki do not disclose the chemical compositions as recited in claim 7-10. The patent to Easley teaches a dispensing device used by hunters in which the device emits a chemical composition comprising urine of an animal. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have used in the device of Cox et al. and Konietzki urine of an animal as taught by Easley as an effective attractant.

Allowable Subject Matter

4. Claim 15 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patent to Kimble is pertinent to Applicant's invention.
